WO 2004/020634 PCT/IB2003/004295

## **CLAIMS**

1. A mutant Neisseria meningitidis ADP-ribosylating enzyme, wherein the mutant has a substitution at one or more of amino acids Glu-109, Glu-111 or Glu-120.

- The mutant enzyme of claim 1, wherein the mutant has reduced or eliminated
  ADP ribosyltransferase and/or NAD-glycohydrolase activity relative to the wild-type enzyme, wherein the wild-type enzyme has amino acid sequence SEQ ID NO: 1.
  - 3. The mutant enzyme of claim 1 or claim 2, wherein the mutation(s) is/are preferably Glu to Asp.
  - 4. The mutant enzyme of any preceding claim, wherein the enzyme comprises one of the amino acid sequences SEQ ID NO: 2, SEQ ID NO: 3 or SEQ ID NO: 4.
- 5. A protein comprising a fragment of a Neisseria meningitidis ADP-ribosylating protein, wherein (i) the fragment includes one or more of amino acids Glu-109, Glu-111 or Glu-120 from said ADP-ribosylating protein, and (ii) one or more of said amino acids Glu-109, Glu-111 or Glu-120 is substituted.
  - 6. The protein of claim 6, wherein the Glu-109, Glu-111 or Glu-120 is substituted with Asp.
- 7. The protein of claim 6 or claim 7, wherein the fragment comprises at least 7 consecutive amino acids from the toxin or mutant toxin.
  - 8. The protein of any preceding claim, for use as an immunogen.
  - 9. The protein of any preceding claim, for use as a parenteral or mucosal vaccine adjuvant.
- 10. Use of the protein of any one of claims 1 to 7, in the manufacture of a medicament for raising an immune response in an animal.
  - 11. An immunogenic composition comprising the protein of any one of claims 1 to 7 in admixture with a second antigen.
  - 12. An antibody which binds to the protein of any one of claims 1 to 7, wherein the antibody binds to an epitope which includes one or more of amino acids Glu-109, Glu-111 or Glu-120.
- 25 13. Nucleic acid encoding the protein of any one of claims 1 to 7.
  - 14. A method of treating a patient, comprising administering a therapeutically effective amount of the protein of any one of claims 1 to 7 and/or the nucleic acid of claim 13 and/or the antibody of claim 12.
- 15. A process for diminishing the ADP-ribosylating enzymatic activity of a *N.meningitidis* ADP ribosyltransferase protein, comprising mutating amino acid residue 109, 111 and/or 120 of said protein.
